

2. Different ways to run CAPRI

Exercise 1: Different ways to run CAPRI

- Define a scenario for a price increase of 10% for wheat in DK
 - via policy editor
 - via batch file
 - via GAMS ide
 - via command line

Exercise 1a: Running with policy editor

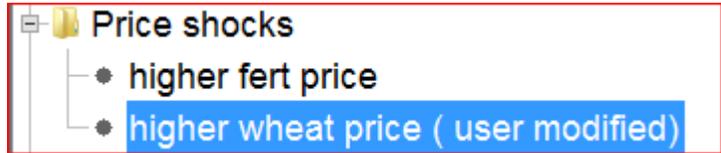

- Policy editor is a code snippet based way to explore and define simple scenarios
- It has dynamic tag editor
- Powerful search over all predefined scenarios
- Approach to define your scenario
 - Do not run as user role “administrator”
 - Select main policy file (cap_after2014 or MTR_RD) **and** combination of code snippets
 - Modify the code snippet or the main policy file and save the changes in a new in your userScen folder
- @All Exercise 1: Create a policy scenario (yields ...) and run with GUI

- Main policy can also be selected here ..
- Take care: Only one file as main policy should be activated

- Save changes only in memory (that the templates are not messed up)
- Indicated by (user modified) and underlining red colour
- Reset changes

- Main Policy file
- Included at the top of the new scenario
- If not needed deselect

File Utilities GUI Settings Help

CAPRI worksteps

- Installation
- Build database
- Generate baseline
- Run scenario**
- Tests

CAPRI tasks

- Define scenario**
- Run scenario with market model
- Run scenario without market model
- Test alternative market model
- Run scenario only with market model

CAPRI: Ini file : default.ini User name : undefined User type : developer Run scenario: Define scenario

The screenshot displays the CAPRI software interface with the following components:

- Left Panel:**
 - CAPRI worksteps:** Installation, Build database, Generate baseline, Run scenario (selected), Tests.
 - CAPRI tasks:** Define scenario (selected), Run scenario with market model, Run scenario without market model, Test alternative market model, Run scenario only with market model.
- Scenario description:**
 - Enter scenario name: ts1
 - Enter scenario description: ts1: Policy Editor, price increase for soft wheat
- Scenario elements:**
 - Search: author, beware, calledby
 - price
 - no market support, higher fert price, higher wheat price (selected), TRQS EU MED
 - Set basis scenario file: ..\gams\scen\base_scenarios\CAP_2014_2020.gms, ..\gams\scen\base_scenarios\CAP_2014_2020_pol_editor.gms, ..\gams\scen\base_scenarios\imr_rd.gms
- Scenario categories tree:**
 - base scenarios
 - bio fuels
 - demand shocks
 - german renewable energy
 - ghg emission abatement
 - input demand
 - macro environment
 - market support
 - NLimits
 - Premiums
 - Price shocks
 - set aside
 - trade policies
 - yield shocks
 - assert scenario include ex
 - void
 - user scenarios
 - ts1 (selected)
 - author : undefined
 - date : 06-06-2018 10:12:16
 - purpose : Scenario definition
 - reponsible : A. Gocht
 - since : 2018
 - Price shocks
 - file for exogenous prices changes
 - DATA(RMSSUP,"UVAG","SWHE","ChangeFactor") = 1.20;

- Bottom Panel:**
- Buttons: Store scenario
- Status bar: CAPRI: | Ini file : default.ini | User name : undefined | User type : developer | Run scenario: Define scenario

- If tags in the file head description are filled out we can use them for search

- New scenario will be saved in userScens in pol_input
- Now available for Run Scenario

Exercise 1b: Running via batch file

- The batch utility in the GGIG allows chain execution
- The option need to be set in a txt file
- We currently store all batch files in GUI\batchfiles
- The complete system is tested using build_database_and_baseline.txt
- Syntax of each task execution are written as commented text into the include file at the bottom

Exercise 1b: Running via batch file cnt.

- Create a text file in CAPRI\GUI\batchfiles
- Copy content of include file into it
- Open in GGIG GUI menu GUI->Batch execution
- Select batchfile
- Run (compile or execute)

The image shows two windows from the GGIG GUI. The top window is titled 'Batch execution' and contains the following fields and buttons:

- Batch file to execute: D:\public\gocht2018\trunk_ex_ante\GUI\bat...
- Buttons: Set file, Edit
- Directory for exp/ref files: [..] Set directory
- Checkboxes: Generate EXP and REF files for HTML documentation, Only compile the GAMS programs
- Buttons: Start batch execution, End execution after next GAMS step, End immediately, Open HTML report

The bottom window is titled 'GGIG batch execution report' and displays a table of runs. The runs are generated from 'D:\public\gocht2018\trunk_ex_ante\GUI\batchfiles\ts18.txt' at 'MI, 6 Juni 18 16:32:57'.

3. The CAPRI listing, the GGIG
include file and Command line
options

The include file

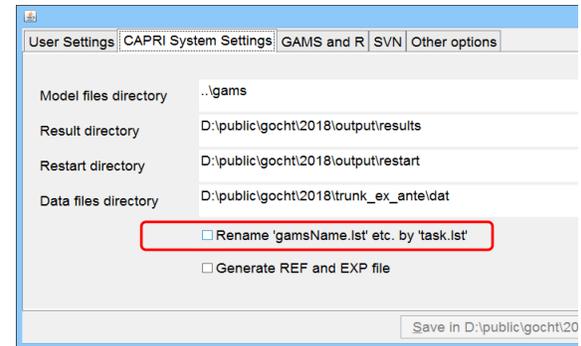

- GGIG GUI converts all options (controls) from the GUI in GAMS readable sets and setglobals, parameters ...
- Each task has one include file
- Include File is generated at compile time
- @all: inspect the include file

Command line parameter in CAPRI (capmod.gms)

- --task="Run scenario without market model"
- -scrdir="D:\temp1"
- --scrdir="D:\temp1"
- -workdir="D:\public\gocht\2018\trunk_ex_ante\gams"
- -curDir="D:\public\gocht\2018\trunk_ex_ante\gams"
- -a=c
- -errorLog=99
- -ef="D:\public\gocht\2018\trunk_ex_ante\gams\Run scenario without market model.exp"
- -rf="D:\public\gocht\2018\trunk_ex_ante\gams\Run scenario without market model.ref"
- -lo=3
- --scen=fortran
- --ggig=on
- pw=200
- errmsg=1
- gdxcompress=1
- ps=0
- -o=Run_scenario_without_market_model.lst

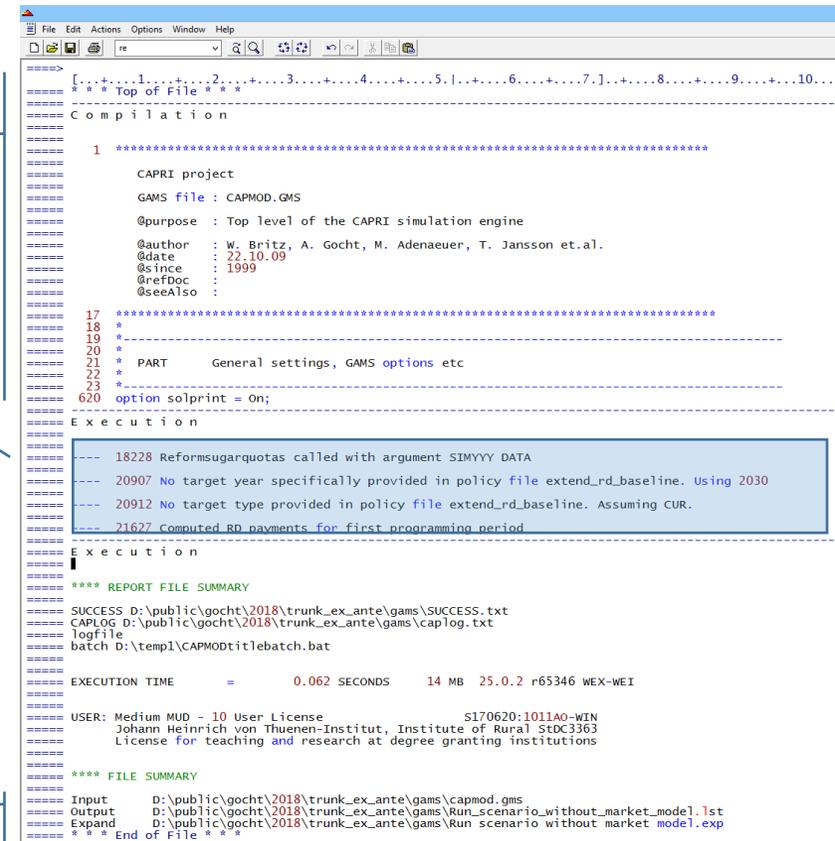

The CAPRI Listing File

- The output file of a GAMS run or compile is called *listing file*.
- compile time and execution -> generates lst
- Capmod.lst or when option -> Run_Scenario_without_market_model.lst
- Option for formatting the listing file
 - errmsg 1 (directly behind the error code a description is given)
 - PC 0-3: padding, Fortran style, stream, no formfeed, formfeed (standard CAPRI) GAMS Version
 - gdxcompress=1 (reduce the gdx file size by 40%)
- Set option in gmsprmNT.txt or pass as argument in GAMS Dir

Structure of the .lst file in capmod

- **Compilation**
 - echo print of the input file(s), possibly error messages
- **Execution**
 - display statements and possibly execution error messages
 - **Model Generation**
 - output during model generation
 - listings of equations and variable listings as well as model statistics and possibly generation execution error messages.
 - **Solution**
 - solution report including the solve summary, the solver report, the solution listing and the report summary
- **Post-Solution.**
 - final execution summary
 - file summary

=====
The model has 495 variables and 460 constraints
with 2842 Jacobian elements, 647 of which are nonlinear.
The Hessian of the Lagrangian has 237 elements on the diagonal,
236 elements below the diagonal, and 255 nonlinear variables.
=====
